PROFESSIONAL SUMMARY

Full-Stack Developer with expertise in Django, React, Next.js, and Electron, specializing in scalable booking platforms, interactive travel planners, and offline desktop POS applications. Skilled in relational database design, client-side data engines, and secure API development. Proficient in integrating interactive mapping (Leaflet) and data visualization (Chart.js) to build responsive, analytics-driven interfaces. Focused on delivering high-performance, secure, and user-centric software across web and desktop environments.

SKILLS

Frontend: HTML, CSS, JavaScript, React, Bootstrap

Backend: Python, Django, Flask, REST APIs

Databases: SQLite, MySQL, MongoDB, PostgreSQL

DevOps: Git, GitHub Actions

Tools: GitHub, VS Code, AI Development Tools (Cursor, Antigravity)

Soft Skills: Analytical Thinking, Team Collaboration, Adaptability, Problem Solving

PROJECTS

Trip Planner – Smart Travel Itinerary & Route Planning System

- Developed a full-stack trip planning application enabling users to create, manage, and share travel itineraries with real-time updates.
- Implemented interactive map-based route planning with location search, autocomplete suggestions, and dynamic distance/time calculations using Leaflet and OpenStreetMap.
- Designed social features including friend system, trip sharing, and received trip cloning with secure access control.
- Built responsive UI with modern dashboard, mobile-first layout, and optimized user experience across devices.
- Tech Stack: Next.js, React, Tailwind CSS, Firebase Authentication, Firestore, Leaflet, OpenStreetMap APIs.

GoBuddy – Tourism Booking & Trip Management Platform

- Architected a full-stack Django web application backed by MySQL for managing custom holiday packages, destinations, and booking lifecycles.
- Implemented an interactive map-based trip planner using Leaflet.js, Carto DB Voyager, and Leaflet Routing Machine for automated driving route generation.
- Integrated OSM Nominatim API with geographic boundary restrictions to automatically resolve destination names, states, and slugs based on map inputs.
- Engineered a dynamic itinerary timeline builder enabling drag-and-drop style activity sequencing, multi-day scheduling, and auto-calculated start/end destinations.
- Tech Stack: Python (Django), MySQL, Leaflet.js, OpenStreetMap APIs, Tailwind CSS, JavaScript

Modern Restaurant POS – Desktop Point of Sale & Restaurant Management System

- Developed a high-performance desktop Point of Sale (POS) application using Electron, providing a secure, offline first system for menu management, billing operations, and restaurant administration.
- Engineered a persistent client-side data layer utilizing structured Local Storage, implementing automated JSON database backups, system imports/exports, and secure credential management.
- Implemented advanced operational algorithms including custom category-first menu re-sequencing, cascading category name synchronization, and business-day date logic for post-midnight transactions.
- Built an interactive analytics dashboard integrated with Chart.js to visualize daily revenue trends, order volume, and operating expenses with thermal-optimized billing print templates.
- Tech Stack: JavaScript (ES6+), Electron, Local Storage, HTML5, CSS3, Chart.js, Font Awesome.

EXPERIENCE

Python Full Stack Intern - SMEC Technologies | Feb - May 2026

- Acquired hands-on experience in full-stack development, utilizing Django, Django REST Framework (DRF), and React (Vite) to build scalable, responsive web architectures.
- Gained proficiency in third-party API integrations, using Leaflet.js, Carto DB tiles, and OSM Nominatim to implement interactive geocoding, boundary validations, and custom routing engines.
- Mastered relational database schema design using MySQL and SQLite, implementing secure authentication workflows with JSON Web Tokens (JWT) and Axios interceptors.
- Utilized industry-standard tools including Git/GitHub for version control, Postman for endpoint testing, and handled system environment configurations and deployments.
- Leveraged prompt engineering for code optimization and test-case generation, and authored custom Python scripts to resolve API-related bottlenecks and sanitize data payloads.

CERTIFICATIONS

- Certified Python Full-stack Developer - SMEC Technologies, June 2025 to Jan 2026
- Python Full Stack Internship Certificate - SMEC Technologies, Feb to May 2026

EDUCATION

Certified Python Full-stack Developer Training - SMEC Technologies

2025 - 2026

Python full-stack development program covering Python, Django, Django REST Framework, REST APIs, authentication, databases, frontend integration, and project development.

Bachelor of Computer Applications

2022 - 2025

Ettumanoorappan College, Mahatma Gandhi University, Kerala

LANGUAGES

- English
- Malayalam
